## Evening Brief

Date: Thursday July 12, 2018

---

### Weather Summary

**...High Risk for Lightning** in northern Nevada and Idaho Overnight Friday and Saturday...

On Friday, wetter thunderstorms will continue over the southern half Nevada, UT and the AZ Strip, with additional moisture pushing northward into northern CA, and may push into far NW NV Friday night and overnight ahead of a weak upper level disturbance. Moisture will be pushed further east into northern NV and southern ID on Saturday, and we have continued **High Risk** for this drier lightning with gusty outflow winds as these areas have recently been very warm and dry.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	3	Moderate Initial Attack Activity
National	3	New Fires and Acres: 24 fires for 860.4 acres; 331 acres large fire growth

---

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

**Fuels and Fire Behavior advisories have been issued for [Nevada](#) and [Utah](#)**

### Fire Potential

Sagebrush live fuel moisture values are still below normal across UT and near record lows for a small area of far western ID. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for early July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over southern NV, the AZ Strip and southern UT, with some areas below the 50th - 70th percentile. Over the rest of UT, ERCs have lowered as well, but are still between the 80th - 90th percentiles. Continued higher humidity and scattered wetting rains through this weekend over the southern and eastern portions of UT/NV and the AZ Strip will minimize any ignitions from growing rapidly.

ERCs are on the rise over western and northern NV into ID as dry weather continues, with current ERCs in the 50th - 80th percentile. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture across portions of western/northern NV now below critical levels and contributing to fire spread.

### Resources:

#### Aviation within the Great Basin

- 24 SEATs
- 11 Type 1 Helicopters / 6 Committed
- 13 Type 2 Helicopters / 9 Committed / 1 (Mechanical O/S)
- 19 Type 3 Helicopters
- 2 CL-415 / 3 LATs / 2 VLATs

#### Crews Committed within the Great Basin

- 20 IHCs Committed / 2 available
- 29 T2IAs Committed / 11 Available

## Current Incident Details
